

Project Proposals

Team 6

Idea 1: “Instant Gratification”

Using Instagram’s API we will show users photos of food posted within a certain radius of their location. Users can look through the photos of food until they see something they like. Clicking on the photo will bring up a Google Maps view showing the restaurant/location where that photo was taken. Our app will also show Yelp reviews for that business.

Idea 2: “Morning News”

Using the New York Times API, we will get the top stories of the day for a series of topics that the user selects. Using the iSpeech API our app will automatically read you your morning news using text to speech translation. Users can easily get their morning news while making breakfast, getting dressed, etc. We could potentially do this for multiple news sources (NYT, Wall Street Journal, CNN, etc.) depending on a user’s preference.

Outcome:

We chose to go with idea 1, the Instagram-based app. After some discussion we decided to officially name the app “**Entree**”.
